

Short and sweet. Implemented [smart-table](#) on a new project, and needed to customize the pagination template. This is simply an override of the default found in [smart-table.js](#)

```
ng.module('smart-table', []).run(['$templateCache', function
($templateCache) {
  $templateCache.put('template/smart-table/pagination.html',
  '<nav ng-if="numPages && pages.length >= 2"><ul class="pagination">'
+
  '<li ng-class=""><a ng-click="selectPage(1)">First</a></li>' +
  '<li ng-class=""><a ng-click="selectPage(currentPage-1)"><i class="fa
fa-fw fa-angle-double-left"></i></a></li>' +
  '<li ng-repeat="page in pages" ng-class="{active:
page==currentPage}"><a ng-click="selectPage(page)">{{page}}</a></li>'
+
  '<li ng-class=""><a ng-click="selectPage(currentPage+1)"><i class="fa
fa-fw fa-angle-double-right"></i></a></li>' +
  '<li ng-class=""><a ng-click="selectPage(numPages)">Last</a></li>' +
  '</ul></nav>');
}]);
```
