

Symfony3 is in fact coming; and I for one am extremely excited. We built [Venni](#) on Symfony 2.3, and have tried to follow an upgrade path in parallel as best we can. With Symfony3 however, there are substantial improvements and changes, and the dreaded drop-off of backwards compatibility for deprecation from Symfony 2.x.

The following video does a great job of giving an overview of some of the major changes in structure, PSR, and upgradability.

[Symfony3 Is Coming - Minitalk](#) from [Atlanta PHP User Group](#) on [Vimeo](#).

Also see [my other post on Symfony3 directory structure changes](#) in more depth.
