

I am extremely proud today to officially release the [php-decoupler](#) from SterlingTS as an open-source project that my colleague [Ken Ploeger](#) and I will be maintaining at [Sterling Talent Solutions](#).

[Ken](#) led the vast majority of the efforts of this project in parallel with helping lead our globalization efforts at Sterling for our flagship [SterlingONE](#) product. This tool allowed us to dramatically increase our efficiency in upgrading our legacy PHP platform to a more modern MVC architecture in an incremental approach without the need to “boil the ocean” and rewrite the entire platform (as many of us software folks love to do).

We’re looking forward to maintaining and expanding this project, and continuing to support the PHP ecosystem for enterprise software-as-a-service software companies.
