

Amazon Prime day 2019 after months of queueing up parts...

After many months of planning and prepping and waiting for Amazon Prime Day, and Newegg's clone of Prime Day, we finally have arrived at a full collection of components for a complete dual-PC custom-mod setup that I will share more details of as soon as it's complete.

Components

- The excessive amount of tubing was entirely because I accurately assumed I would need several do-overs.
- Not accounted for are the many grommets, USB cables, keystone jacks, wall plates, and misc materials that went into the rest of the build (more on that later).

Alienware AW3418DW 34.1" WQHD Ultrawide Gaming Monitor
